# Vocabulary Research Worksheet

Each *ScienceBuddies* project has the same components. To formulate your problem statement (testable question) you read the first three components: Abstract, Objective, and Introduction. Now you will complete the Terms and Concepts component of your project. Begin by writing the definitions to your project's "terms" (vocabulary words), many of the definitions can be found in your project's introduction, but dictionaries and science text books are also good resources. Use the 2-column chart to organize your vocabulary research.

Vocabulary Word	Definition

Continue on the back side if you have additional vocabulary words.
