

Name: _____ Teacher: _____

Project Title: _____

Q&A Research Worksheet

Each *ScienceBuddies* project has the same components. To formulate your problem statement (testable question) you read the first three components: **Abstract**, **Objective**, and **Introduction**. Now you will complete the **Terms and Concepts** component of your project. Proceed by searching for answers to your project's questions, many of the answers can be found in your project's introduction, but the internet and science text books are also good resources. Use the 2-column chart to organize your Q&A (questions & answers) research.

Questions	Answers

Continue on the back side if you have additional questions to answer.
